

## Dear Kearns Improvement District Customer,

Kearns Improvement District has hired Insituform Technologies to rehabilitate (repair) aging sewer mains on **5010 S** and **5050 S** using a CIPP (Cured-In-Place Pipe) process. This method creates a new pipe lining inside the existing sewer pipe without having to dig up and replace the entire sewer line.

### When?

Work is scheduled to begin June 29, 2026.

The project is expected to last about 4 days (2 days per street)

### How will it effect you?

#### Parking restrictions

- Residents are asked to minimize on-street parking during that week so crews can access sewer manholes

#### Temporary Sewer Service Interruption

- Your home's sewer service will be unavailable for a few hours while the liner is installed and your sewer connection (lateral) is reconnected.
- The contractor will notify you the day before your specific interruption.
- While your sewer service is temporarily out of service, avoid:

Flushing toilets, running sinks for extended periods, taking showers or baths, doing laundry, & running the dishwasher. Using drains during the outage could cause wastewater to back up into your home's plumbing.

**Our Promise to you our customers, our employees, and our community, is that you will know that KID CARES!**

Respectfully, Robert Lutz

Director of Operations.
